

FORTHCOMING PAPERS

Spatial Mapping of Flame Radical Emission Using a Spectroscopic Multi-Colour Imaging System

S. Andersson-Engels, P. Kauranen, S. Svanberg (Sweden)

A Picosecond CuBr Laser

Zhu Lei, Lin Fucheng (P.R. China)

Ultrashort Far-Infrared Superradiant Emissions Optically Pumped by Truncated Hybrid 10 μm CO₂ Laser Pulses

D. P. Scherrer, A. W. Kulin, R. Kesselring, F. K. Kneubühl (Switzerland)

Separation of Tritium from Deuterium by Pulsed NH₃ Laser-Selective Multiple Photon Dissociation of CTCl₃

A. K. Nayak, S. K. Sarkar, D. J. Biswas, K. V. S. RamaRao,
J. P. Mittal (India)

Non-Invasive Determination of Shock Wave Pressure Generated by Optical Breakdown

A. G. Doukas, A. D. Zweig, J. K. Frisoli, R. Birngruber,
T. F. Deutsch (USA)

Possible Excitation of a Fast Sodium Beam by Laser Irradiation

P. Kuik, H. A. Dijkerman, H. G. M. Heideman (The Netherlands)

Laser-Based Diagnostics for Condensation in Laser-Ablated Copper Plasmas

A. D. Sappey, T. K. Gamble (USA)

Laser-Induced Electron Emission from an Au-Surface Irradiated by Single Picosecond Pulses at $\lambda = 2.95 \mu\text{m}$. The Intermediate Region Between Multiphoton and Tunneling Effects

C. Tóth, G. Farkas (Hungary), K. L. Vodopyanov (USSR)

The Temperature Dependence of the Refractive Index of an Aqueous Suspension of Polystyrene Microspheres

S. De Nicola, P. Mormile, G. Pierattini (Italy)

A Spark Channel Plasma Electrode for a CO₂ Laser Gas Discharge

A. H. Labun, H. J. J. Seguin, C. E. Capjack (Canada)

Simple Generation of 400–700 nm Picosecond Dye Laser Pulses with Nanosecond Laser Pumping

N. Daiung, Y. H. Meyer (France)

Generation of Three-Dimensional Free-Standing Metal Micro-Objects by Laser Chemical Processing

O. Lehmann, M. Stuke (F.R. Germany)

Fast Polarization Reversal in Thin Copolymer Films of Vinylidene Fluoride-Trifluoroethylene

Li-Jie, E. Schreck, K. Dransfeld (F.R. Germany)

C. P. Slichter, University of Illinois at
Urbana-Champaign, IL, USA

Principles of Magnetic Resonance

3rd enlarged and updated ed. 1989. XI, 655 pp. 185 figs.
(Springer Series in Solid-State Sciences, Vol. 1).
Hardcover DM 89.— ISBN 3-540-50157-6

Magnetic resonance is a powerful experimental method for investigating the properties of condensed matter at the atomic or molecular level. This text is intended for graduate students in physics, chemistry, materials science, biology, medicine, or engineering intending to work in nuclear magnetic resonance. The third edition adds new material to many parts, plus new sections on one- and two-dimensional Fourier transform methods, multiple quantum coherence, and magnetic resonance imaging.

From the reviews:

"... one of the best expositions of the quantum theory of resonance in existence. It has my highest recommendation for use as a textbook." *Journal of the Optical Society of America*

"The clarity and style in which the book is written reveals Slichter's research expertise and talent as an excellent teacher and expositor..." *Physics Today*
