

FORTHCOMING PAPERS

On the Recombinational Enhancement of Ionic Lines in the Afterglow of a Pulsed Noble-Gas Hollow-Cathode Discharge

G. Rubin, M. Jánossy, P. Mezei, P. Apai (Hungary)

Experimental Study of Enhanced Emission of the Laser-Ablated Plume in Backing Gas

H. P. Gu, Q. H. Lou (P. R. China), N. H. Cheung, S. C. Chen, Z. Y. Wang, P. K. Lin (Hong Kong)

Integrated Nanostrip Dipole Antennas for Coherent 30 THz Infrared Radiation

I. Wilke, W. Herrmann, F. K. Kneubühl (Switzerland)

Sensitive Amplitude- and Phase-Modulated Absorption-Spectroscopy with a Continuously Tunable Diode Laser

R. Großkloß, P. Kersten, W. Demtröder (Germany)

Measurement of the Temperature Dependence of Quartz Refractive Indices: A Technique

S. De Nicola, G. Carbonara, A. Finizio, G. Pierattini (Italy)

Applied Physics A 58, No. 1 (1994)

Synergetic Ordering in Solids (Part II)

Editorial 1

C. Tölg, M. Zaiser, P. Hähner, W. Frank Theory of Radiation-Induced Self-Organization of Defect Structures. Part I. Stacking-Fault-Tetrahedron Lattices 3

C. Tölg, P. Hähner, M. Zaiser, W. Frank Theory of Radiation-Induced Self-Organization of Defect Structures. Part II. Ordering of Patches of Stacking-Fault-Tetrahedron Lattices 11

V. I. Dubinko, A. A. Turkin Self-Organization of Cavities Under Irradiation 21

A. A. Turkin, V. I. Dubinko Formation of Dislocation Patterns Under Irradiation 35

P. Hähner Theory of Solitary Plastic Waves. Part I. Lüders Bands in Polycrystals 41

P. Hähner Theory of Solitary Plastic Waves. Part II. Lüders Bands in Single Glide-Oriented Crystals 49

Solids and Materials

Y. Itoh, H. Murakami Defect Study on Electron Irradiated GaAs by Means of Positron Annihilation 59

V. S. Grechishkin Application of Multipulse Sequences in Remote NQR 63

S. S. Alimpiev, M. E. Belov, V. V. Mlinsky, S. M. Nikiforov, V. I. Romanjuk Negative-Ion Emission during Laser Ablation of Multicomponent Materials 67

X. L. Wang, S. X. Shang, H. Wang, M. H. Jiang, Z. X. Zhao Superconductivity of Bi2(Sr0.9Ca0.1)2CuOy Single Crystals 73

Surfaces and Multilayers

G. Kragler, H. Bender, G. Willeke, E. Bucher, J. Vanhellefont Characterization of SIPOS Films by Spectroscopic Ellipsometry and Transmission Electron Microscopy 77

L. Däweritz, H. Kostial Self-Organized In-Plane Incorporation of Si Atoms in GaAs by Molecular Beam Epitaxy 81

R. Könenkamp, R. Henninger Recombination in Nanophase TiO2 Films 87

W. T. Chyla, W. D. Deering Electrostatic Correction to the Square-Potential Model of Nanostructures Significantly Affects Current Resonances 91

N. Okada, Y. Katsumura, K. Ishigure Improvement of Corrosion Resistance of Carbon Steel using Chemical Vapor Deposition from the Mixture of Mo(CO)6 and Cr(CO)6 with an ArF-Excimer Laser 99

COPYRIGHT TRANSFER AGREEMENT

Copyright to the article entitled "....."

by..... is hereby transferred to Springer-Verlag (for US Government: to the extent transferable), effective if and when the article is accepted for publication in APPLIED PHYSICS.

However, the authors reserve the following:

- 1. All proprietary rights other than copyright, such as patent rights.
2. The right to grant or refuse permission to third parties to republish all or part of the article or translation thereof.

In the case of whole articles, such third parties must obtain Springer-Verlag's permission as well. However, Springer-Verlag may grant rights with respect to journal issues as a whole.

- 3. The right to use all or part of this article in future works of their own, such as lectures, press releases, reviews, textbooks, or reprint books.

To be signed by at least one of the authors (who agrees to inform the others, if any) or, in the case of a "work made for hire" by the employer.

(Signature) (Print Name)
(Corporate Title, if not Author) (Date)

This Transfer Agreement results from the US Copyright Act of 1976, effective 1 January 1978. Prospective authors may photocopy the form and send it in with a paper. According to the wording of this form, the agreement becomes legally binding only if the paper is accepted and on the date of acceptance; otherwise acceptance is conditional and further processing for publication will be delayed until Springer-Verlag receives the properly executed form.

"Works for hire" are articles produced as part of employment, most often in an industrial laboratory. In these cases, the employer holds the copyright and an authorized corporation representative must sign the transfer form. Some authors are government employees and their articles may not be eligible for copyright, depending on whether or not the preparation of the article is an official requirement of employment. Springer-Verlag's copyright transfer form attempts to bypass potentially complicated legal issues by merely asking these government employees to transfer copyright "to the extent transferable".

The majority of physics articles have more than one author and, as a rule, each co-authors's contribution is considered an inseparable part of the whole. Only one author need sign the transfer for an article. The terms "work for hire" and a "work of the US government" apply only if all the authors have written an article under the same conditions. For example: if one author not employed by the government contributes to an article that is signed by four others who are government employed, the article is not considered a "work of the US government".

Note that the signed statement given above must be received by Springer-Verlag before the manuscript can be accepted for publication.
