

FORTHCOMING PAPERS

Broadband (1000 cm⁻¹) multiplex CARS spectroscopy: Application to polarization sensitive and time-resolved measurements

B.N. Toleutaev, T. Tahara, H. Hamaguchi (Japan)

Mechanism transition of self-pumped phase conjugation in KTa_{1-x}Nb_xO₃:Fe Crystals

Y. Lian, H. Gao, S.X. Dou, H. Wang, P. Ye, Q. Guan, J. Wang (P.R. China)

Cat's-eye reflectron

E.V. Moskovets, V.S. Letokhov (Russia)

Laser-excited nonlinear properties of BaF₂ and its application in a single-shot spatially insensitive autocorrelator

K. Osvay, I.N. Ross, C.J. Hooker, J.M.D. Lister (UK)

Interferometric coherent raman spectroscopy with incoherent light: Some applications

S.A. Schaertel, A.C. Albrecht (USA), A. Lau, A. Kummrow (Germany)

Detection of atomic oxygen in flames by absorption spectroscopy

S. Cheskis, S.A. Kovalenko (Russia)

Applied Physics A 59, No. 1 (1994)

Scanning Probe Methods in Materials Science. Part I

Editorial 1

M. Labardi, M. Allegrini, M. Salerno, C. Frediani, C. Ascoli
Dynamical friction coefficient maps using a scanning force and friction microscope 3

W. Allers, U.D. Schwarz, G. Gensterblum, R. Wiesendanger
Scanning and friction-force microscopy of thin C₆₀ films on GeS(001) 11

K. Schifmann, X. Jiang
Investigation of heteroepitaxial diamond films by atomic force and scanning tunneling microscopy 17

H. Bluhm, U.D. Schwarz, F. Herrmann, P. Paufler
Study of the influence of native oxide layers on atomic force microscopy imaging of semiconductor surfaces 23

G. Persch, Ch. Born, B. Utesch
Ultrathin-film hardness investigations by a modified atomic force microscope 29

U.D. Schwarz, H. Haefke
Investigation of precipitated colloidal particles by scanning force microscopy: Silver-halide microcrystals 33

U. Hartmann
Scanning probe microscopy on superconductors: Achievements and challenges 41

J. Burger, M. Lippert, W. Dorsch, P. Bauer, G. Saemann-Ischenko
Observation of the early stages of growth and the formation of growth spirals in epitaxial YBa₂Cu₃O_{7-x} thin films by AFM 49

M. Löhndorf, F. Goerke, U. Merkt, R. Wiesendanger
Growth stages of YSZ-buffer layers and YBa₂Cu₃O_{7-x} thin films on silicon substrates studied by scanning probe microscopy 57

A. Wadas, P. Rice, J. Moreland
Recent results in magnetic force microscopy 63

Regular Papers

J. Leppert, S. Peudenier, E. Bayer, B.C. Grabmaier, G. Blasse
Time-resolved emission spectroscopy of gadolinium vanadate ceramics (GdVO₄:Bi³⁺) 69

J. Brannon, C. Snyder
Pulsed 532 nm laser wirestripping: Removal of dye-doped polyurethane insulation 73

Rapid Communications

H. Coufal, K. Meyer, R.K. Grygier, M. de Vries, D. Jenrich, P. Hess
Measurement of the elastic properties of evaporated C₆₀ films by surface acoustic waves 79

S. Preuss, E. Matthias, M. Stuke
Sub-picosecond UV-laser ablation of Ni films. Strong fluence reduction and thickness-independent removal 83

COPYRIGHT TRANSFER AGREEMENT

Copyright to the article entitled "....."

..... is hereby transferred to Springer-Verlag (for US Government: to the extent transferable), effective if and when the article is accepted for publication in APPLIED PHYSICS.

However, the authors reserve the following:

1. All proprietary rights other than copyright, such as patent rights.

2. The right to grant or refuse permission to third parties to republish all or part of the article or translation thereof.

In the case of whole articles, such third parties must obtain Springer-Verlag's permission as well. However, Springer-Verlag may grant rights with respect to journal issues as a whole.

3. The right to use all or part of this article in future works of their own, such as lectures, press releases, reviews, textbooks, or reprint books.

To be signed by at least one of the authors (who agrees to inform the others, if any) or, in the case of a "work made for hire" by the employer.

(Signature)

(Print Name)

(Corporate Title,
if not Author)

(Date)

This **Transfer Agreement** results from the US Copyright Act of 1976, effective 1 January 1978. Prospective authors may photocopy the form and send it in with a paper. According to the wording of this form, the agreement becomes legally binding only if the paper is accepted and on the date of acceptance; otherwise acceptance is conditional and further processing for publication will be delayed until Springer-Verlag receives the properly executed form.

"Works for hire" are articles produced as part of employment, most often in an industrial laboratory. In these cases, the employer holds the copyright and an authorized corporation representative must sign the transfer form. Some authors are government employees and their articles may not be eligible for copyright, depending on whether or not the preparation of the article is an official requirement of employment. Springer-Verlag's copyright transfer form attempts to bypass potentially complicated legal issues by merely asking these government employees to transfer copyright "to the extent transferable".

The majority of physics articles have more than one author and, as a rule, each co-authors's contribution is considered an inseparable part of the whole. Only one author need sign the transfer for an article. The terms "work for hire" and a "work of the US government" apply only if all the authors have written an article under the same conditions. For example: if one author not employed by the government contributes to an article that is signed by four others who are government employed, the article is not considered a "work of the US government".

Note that the signed statement given above must be received by Springer-Verlag before the manuscript can be accepted for publication.
