

A check-list of the Korean cultivated plants

BAIK MUN-CHAN¹, HOANG Ho-DZUN² and KARL HAMMER

(Eingegangen am 9. Januar 1986)

Summary

On the basis of the "Flora Coreana" and other Korean sources as well as on an own exploration a check-list of the cultivated plants covered by this Flora is compiled. Altogether 316 species and several infraspecific taxa could be listed. For every species a concise synonymy, distribution patterns, use, the Korean name and in some cases additional remarks are given. New combinations are proposed for *Eutrema koreana* and *Fallopia ciliinervis*. The check-list provides a useful tool for the exploration of plant genetic resources and may be equally interesting for ethnobotanists and other researchers engaged in cultivated plants.

Introduction

The plant genetic resources of the Democratic People's Republic of Korea are jointly explored by scientists of the Academy of Sciences of the D.P.R.K. and the Academy of Sciences of the German Democratic Republic (24). The basic literature information for the preparation of this exploration was drawn from the "Flora Coreana" (9–16) and a check-list has been compiled for the cultivated plants which constitute an important part of the plant genetic resources. The first version of this check-list proved to be useful for exploration work and it could be enlarged and improved during our mission (24). In addition information was taken from some books on medicinal plants (4–7, 19, 20) and other crops (8, 17).

In compiling the check-list the principal ideas of MANSFIELD (2) were followed, i.e. plants which are grown only as decorative plants are excluded. MANSFIELD used one of the precursors of the "Flora Coreana", the "Names of Korean plants" (1) for the preparation of his book (see also fig. 1). Of course, the utility was limited because of unsurmountable language barriers. Though it was not possible to include our compilation into the new edition of "MANSFIELD's list" (22) it can be useful for forthcoming editions.

² Botanical Institute of the Academy of Sciences of the D.P.R.K., Pyongyang.

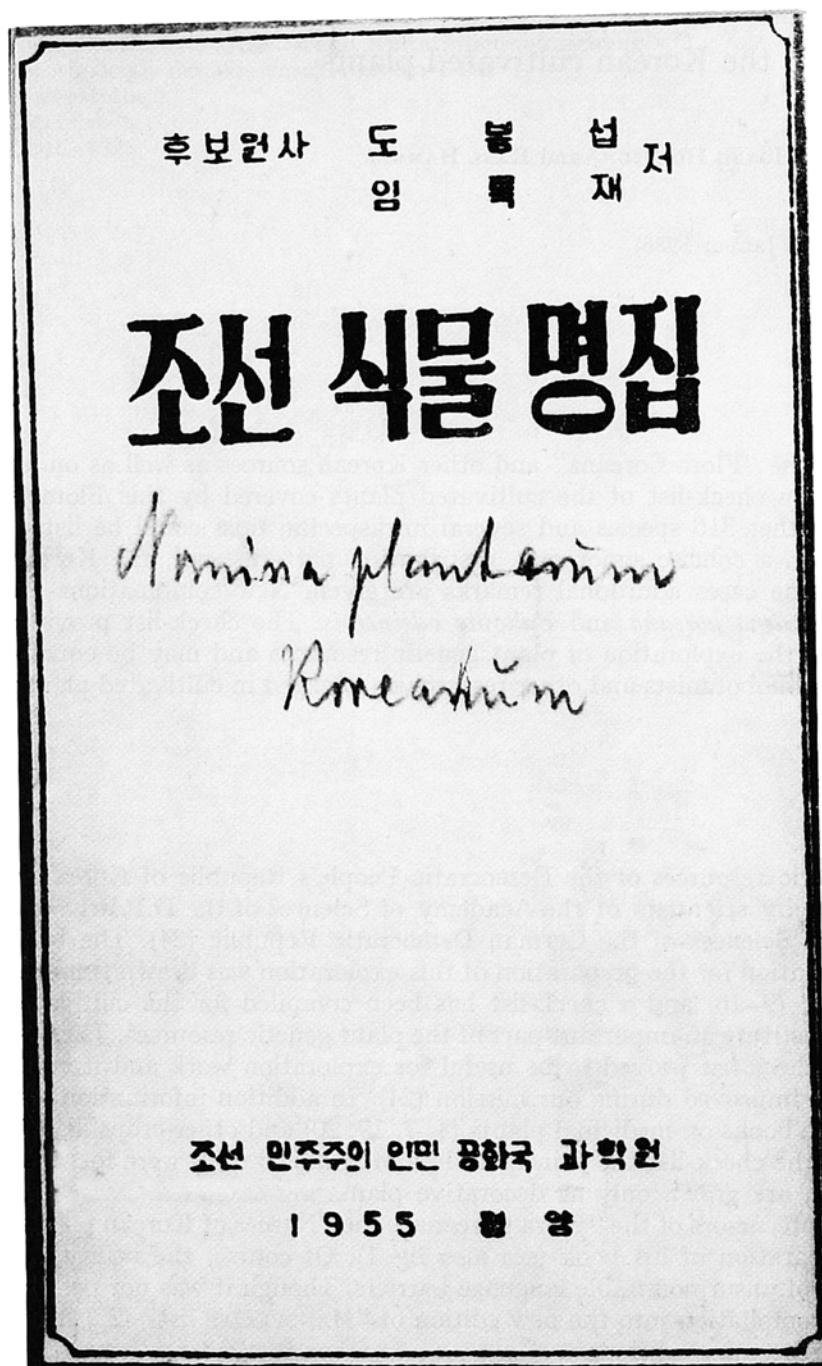

Fig. 1 Front page of Dzosonsig. (1) with the handwritten translation of the title by R. MANSFELD from the Gatersleben library

Explanations

In the check-list the alphabetical order of the botanical names is followed. A concise synonymy is referring to basionyms and "Eastern" synonyms, mainly. For a more complete synonymy see 2, 16, 22. In some cases important synonyms are included into the alphabetical listing referring to their correct names. The area covered by this check-list is the same as in Flora Coreana.

Korean plant names

The principal source for the Korean plant names is the dictionary by RI and HOANG (21) which has been recently reviewed (23). For the transcription the following table is used (fig. 2).

Distribution

The distribution is indicated according to Fl. Cor. with additional data from other sources (4-8, 18-20) and own observations (24). It should be noted that the distribution is indicated only for rather comprehensive areas. When wild and cultivated races of a species occur in the Fl. Cor. the distribution of the whole species is given, e.g. for *Panax schinseng* (N. M.), whereas the area of cultivation is confined around Kaesong.

G. = general distribution

N. = Northern distribution, the Southern border is a line between Changsan Cape at the West coast and Wonsan at the East coast

M. = central distribution, between N. and S.

S. = Southern distribution, the Northern border is a line between the Taean Peninsula at the West coast and the Jongil Peninsula at the East coast

Ch. = Cheju Island

U. = Ullung Island

Use

The different modes of use are given in the order of their importance.

Abbreviations

C. = cereals including pseudo-cereals

Fi. = fibre crops

Fo. = fodder crops

I. = industrial crops

M. = medicinal plants

N. = nuts and other fruits used like nuts

Oi. = oil crops

P. = pulses

Sp. = spice plants

ㄱ	g (k)	ㅏ	a
ㄴ	n	ㅑ	ja
ㄷ	d (t)	ㅓ	o
ㄹ	r or l	ㅕ	jo
ㅁ	m	ㅗ	o
ㅂ	b (p)	ㅜ	jo
ㅅ	s	ㅠ	u
ㆁ	ng or not pronounced	ㅡ	ju
ㅈ	dz	ㅣ	u
ㅊ	tsch	ㅔ	i
ㅋ	k	ㅐ	ae
ㅌ	t	ㅖ	jae
ㅍ	p	ㅔ	e
ㅎ	h	ㅖ	je
ㄲ	gg	ㅚ	oe
ㄸ	dd	ㅟ	wi
ㅃ	bb	ㅚ	ue
ㅆ	ss	ㅟ	wa
ㅉ	tdz	ㅢ	wo
		ㅪ	wae
		ㅪ	we

ae, oe and ue are diphthongs

St. = starch plants excl. cereals
V. = vegetables

The plant parts used are indicated in brackets.

(b.) = bulbs
(ba.) = bark
(fl.) = flowers
(fr.) = fruits
(h.) = herb
(l.) = leaves
(r.) = roots, rhizomes and other related parts
(s.) = seeds
(st.) = stem
(w.) = wood

Remarks

The remarks are concerning specifications of use, nomenclatural notes, observations etc. O. indicates that the species was observed and C. that it has been collected during our mission (24).

Illustrations

Some of the typical Korean cultivated plants are illustrated. Figures 4, 12, 13, 14, 29, 34 are provided by the Botanical Institute of the Academy of Sciences of the D.P.R.K., by permission of the Botanical Institute figures have been taken from Dzsonjag. (3, 5 a, 6, 8, 11, 18, 19, 27, 30, 31) and from Dzonsonsig-muldogam (7, 10, 15–17, 21, 22, 24, 26, 28, 32, 33).

Use: Fr.

Rem.: O.

Prunus cerasus L., Sp. Pl. 474, 1753, p.p. — *Cerasus vulgaris* Mill., Gard. Dict. ed. 8, no. 1, 1768; Nongob. 1002, 1973. (Rosaceae).

Sinbotnamu

Distr.: N.

Use: Fr.

Prunus mume (Sieb.) Sieb. et Zucc., Fl. Jap. 1: 29, 1836; Fl. Cor. 3: 232, 1974. — *Armeniaca mume* Sieb., Syn. Fl. Oecon. Jap. 367, 1828. (Rosaceae).

Maehoanamu

Distr.: G.

Use: Fr.

Rem.: 4 botanical varieties are listed in Fl. Cor. 3: 233, 1974.

Prunus nakaii Lev. in Feddes Rep. 7: 198, 1909; Fl. Cor. 3: 247, 1974. (Rosaceae).

Sanaengdunamu

Distr.: G.

Use: Fr., M. (s.)

Rem.: Root-stock for graftings.

Prunus persica (L.) Batsch., Beytr. Entw. Pragm. Gesch. Drey. Nat. Reich. 1: 30, 1801; Fl. Cor. 3: 236, 1974. — *Amygdalus persica* L., Sp. Pl. 472, 1753; *Prunus persica* var. *vulgaris* Maxim. in Mel. Biol. Ac. Petersb. 11: 668, 1883; Dzosongod. 48, 1964. (Rosaceae).

Bogsunganamu

Distr.: G.

Use: Fr., M. (s., fl., l.)

Prunus salicina Lindl. in Trans. Hort. Soc. Lond. 7: 239, 1830; Fl. Cor. 3: 230, 1974. (Rosaceae).

Tschurinamu

Distr.: G.

Use: Fr., M.

Prunus tomentosa Thunb., Fl. Jap. 203, 1784; Fl. Cor. 3: 249, 1974. (Rosaceae).

Aengdunamu

Distr.: G.

Use: Fr.

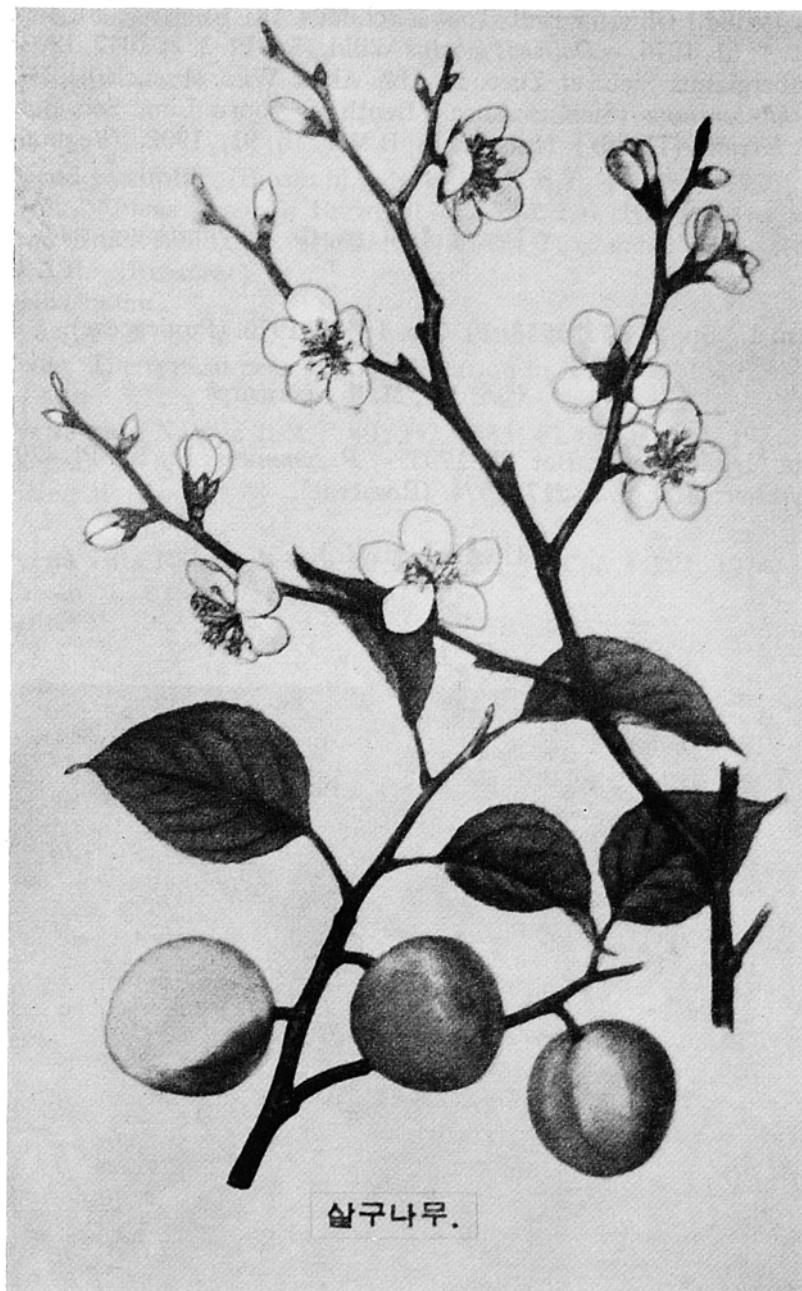

Fig. 27 *Prunus ansu* (Maxim.) Komar., a common fruit tree

Pueraria lobata (Willd.) Ohwi in Bull. Tokyo Sci. Mus. 18: 16, 1947; Fl. Jap. 693, 1953; Fl. Cor. 4: 61, 1976. — *Dolichos lobatus* Willd., Sp. Pl. 3, 2: 1047, 1803; *Pachyrhizus thunbergianus* Sieb. et Zucc. in Abh. Akad. Wiss. Muensch. 4: 237, 1846; *Pueraria thunbergiana* (Sieb. et Zucc.) Benth. in Journ. Linn. Soc. Bot. 9: 122, 1865; *P. hirsuta* (Thunb.) Matsum. in B.M.T. 16: 91, 1902. (Leguminosae).

Tschilg

Distr.: G.

Use: Fo., M. (r., fl., Amylum puerariae)

Rem.: O.

Punica granatum L., Sp. Pl. 472, 1753; Fl. Cor. 4: 427, 1976. (Punicaceae).

Sogjunamu

Distr.: M. S.

Use: Fr., M. (b., pericarp)

Pyrus domestica Medik., Gesch. Bot. 87, 1793. — *P. communis* L., Sp. Pl. 479, 1753 excl. var. *pyraster*; Fl. Cor. 3: 217, 1974. (Rosaceae).

Bjongbaenamu

Distr.: G.

Use: Fr., M. (fr.)

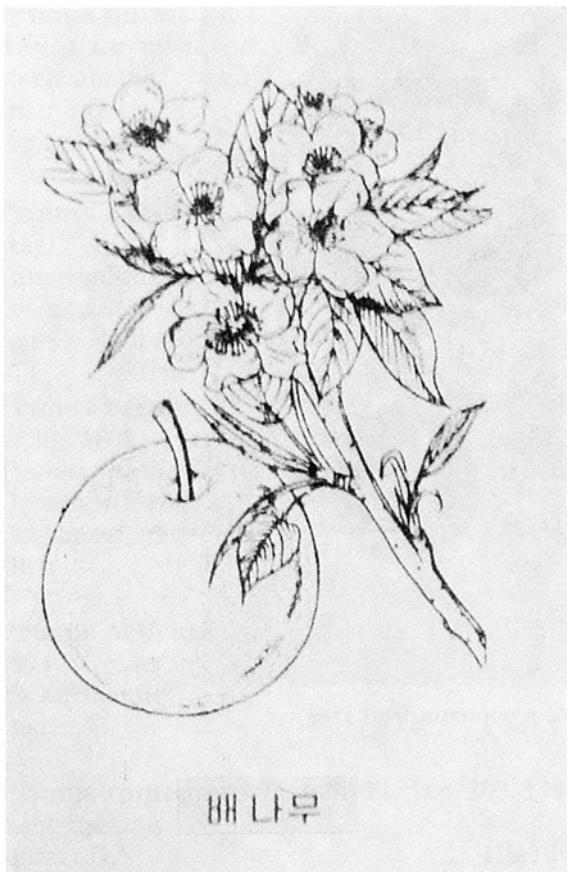

Fig. 28 *Pyrus pyrifolia* (Burm. fil.) Nak., the typical Korean pear

Pyrus macrostipes Nak. in B.M.T. 30: 28, 1916; Fl. Cor. 3: 221, 1974. (Rosaceae).

Tschambaenamu

Distr.: N.

Use: Fr.

Pyrus pyrifolia (Burm. fil.) Nak. in B.M.T. 40: 564, 1926; Fl. Cor. 3: 222, 1974. — *Ficus pyrifolia* Burm. fil., Fl. Ind. 226, 1768; *Pyrus serotina* Rehd. in Proc. Amer. Acad. Art. Sci. 50: 231, 1915; *P. montana* Nak., Rep. Veg. Chirisan 34, 1915. (Rosaceae).

Dolbaenamu

Distr.: N. M. S.

Use: Fr., M. (fr.)

Rem.: The typical pear under cultivation in Korea. O. Fig. 28

Pyrus rufa Nak. in B.M.T. 49: 347, 1935; Fl. Cor. 3: 224, 1974. (Rosaceae).

Baegsili

Distr.: M. (Gjongi)

Use: Fr.

Pyrus vilis Nak. in B.M.T. 30: 28, 1916; Fl. Cor. 3: 221, 1974. (Rosaceae).

Habsili

Distr.: M.

Use: Fr.

Fig. 29 *Raphanus sativus* L. var. *niger* (Mill.) Kerner, an important vegetable and main ingredient for the traditional Korean dish „Kimchi“

Raphanus sativus L., Sp. Pl. 669, 1753; Fl. Cor. 2: 362, 1974 var. **niger** (Mill.) Kerner, Abh. Oekon. Pfl. 3: t. 257/258, 1789. (Cruciferae).

Muu

Distr.: G.

Use: V. (r.), M. (s.)

Rem.: Several horticultural forms are described in Fl. Cor. 2: 363–364, 1974.

Important vegetable and ingredient for the Korean dish "kimchi". O. The var. *oleiformis* Pers., Syn. 2: 208, 1806; Nongob. 101, 1973 ("Girummuu") is occasionally cultivated as an oil crop. Fig. 29

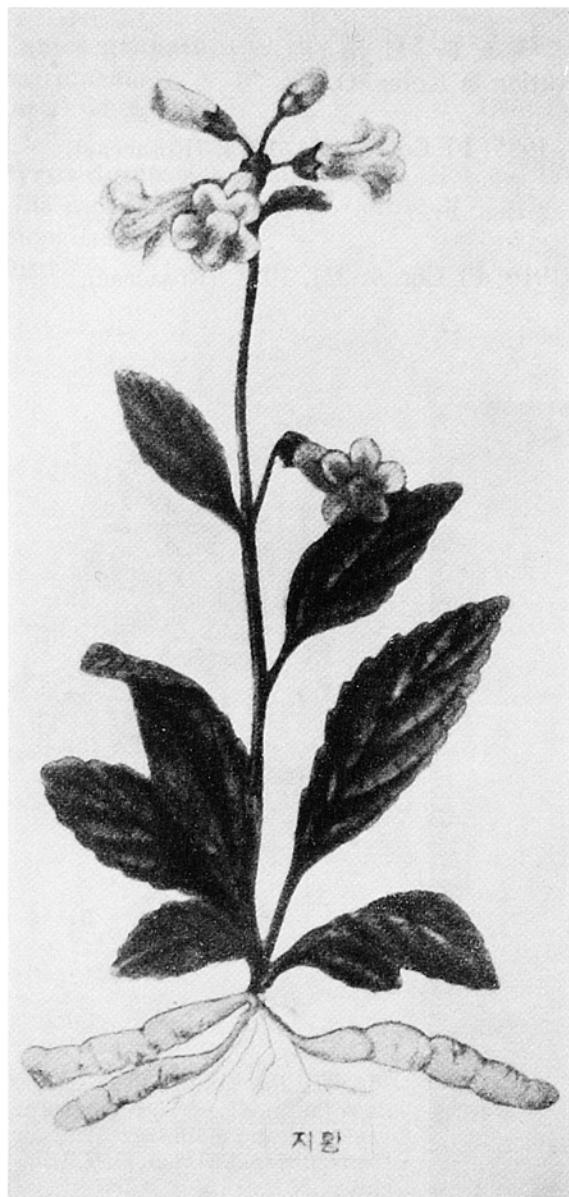

Fig. 30 *Rehmannia glutinosa* (Gaertn.) Libosch. ex Steud., a medicinal plant of great importance

Rehmannia glutinosa (Gaertn.) Libosch. ex Steud., Nomencl. ed. 2, 2: 440, 1841; Dzosongod. 125, 1964. — *Digitalis glutinosa* Gaertn. in Nov. Comm. Ac. Petrop. 14: 544, 1770; *Rehmannia lutea* Maxim. var. *purpurea* Mak. in B. M. T. 12: 301, 1898; *R. glutinosa* var. *purpurea* (Mak.) Mak. et Nem., Fl. Jap. 226, 1926; Fl. Cor. 5: 329, 1975. (Scrophulariaceae).

Dzihoang

Distr.: G.

Use: M. (r.)

Rem.: Important plant in Korean traditional medicine; frequently cultivated.
O. Fig. 30

Rheum coreanum Nak. in B.M.T. 33: 47, 1919; Fl. Cor. 2: 19, 1974. (Polygonaceae).

Woangdaehoang

Distr.: N.

Use: M. (r.)

Rem.: Only sporadically cultivated in mountainous areas. Fig. 31

Rheum rhabarbarum L., Sp. Pl. 372, 1753. — *R. undulatum* L., Sp. Pl. ed. 2: 531, 1762; Fl. Cor. 2: 19, 1974. (Polygonaceae).

Daehoang

Distr.: N. M.

Use: M. (r.)

Rem.: Obviously in this species the leaf stalks are also eaten, but it is mainly used for medicinal purposes.

Rheum rhabonticum L., Sp. Pl. 371, 1753; Nongob. 597, 1973. (Polygonaceae).

Dunggunipdaehoang

Distr.: M. S.

Use: V. (l.), M. (r.)

Rem.: The fleshy leaf stalks are eaten.

Rhus succedanea L., Mant. Pl. 2: 221, 1771; Fl. Cor. 4: 195, 1976. — *R. succedanea* var. *japonica* Engl. in DC., Mongr. Phan. 4: 399, 1883; *Toxicodendron succedaneum* (L.) Ktze., Rev. Gen. 1: 154, 1891. (Anacardiaceae).

Gomjangotnamu

Distr.: S.

Use: M. (*Cera japonica*)

Rhus verniciflua Stock., Bot. Mat. Med. 2: 164, 1812; Fl. Cor. 4: 196, 1976; Dzosondong. 1: 617, 1979. — *R. vernicifera* DC., Prodr. 2: 68, 1825. (Anacardiaceae).

Otnamu

Distr.: N., M., S., Ch.

Use: M. (*Lacca sinica* Exsiccata)

Rem.: Used for the production of lacquer for coating furniture etc.

Ricinus communis L., Sp. Pl. 1007, 1753; Fl. Cor. 4: 221, 1976. (Euphorbiaceae).

Pimadzu

Distr.: G.

Use: Oi., Fo., M. (s.)

Rem.: The leaves are used as fodder for silk worms. C.

Fig. 31 *Rheum coreanum* Nak. is occasionally grown as a medicinal plant

Robinia pseudo-acacia L., Sp. Pl. 722, 1753; Fl. Cor. 4: 108, 1976. (Leguminosae).

Akasanamu

Distr.: G. Use: Fo., M.

Rem.: Dried leaves are used as fodder for pigs and chicken; for this purpose large-leaved races are preferred. Planted also for soil erosion control. O.

Rosa rugosa Thunb., Fl. Jap. 213, 1784; Fl. Cor. 3: 126, 1974. (Rosaceae).

Haedanghoa

Distr.: G. Use: M. (fr.)

Rem.: Frequently cultivated in the Wonsan area, also for sand stabilization near the sea side. O.

Ruta graveolens L., Sp. Pl. 383, 1753; Dzosondong. 1: 617, 1979. (Rutaceae).

Unhjang

Distr.: G. Use: M. (h.)

Sabina chinensis (L.) Ant., Cupr. Gatt. 54, 1857; Fl. Cor. 1: 74, 1972. — *Juniperus chinensis* L., Mant. Pl. 2: 127, 1771. (Cupressaceae).

Hjangnamu

Distr.: G. Use: M.

Rem.: The tree is often planted near to the houses. O.

Saccharum officinarum L., Sp. Pl. 54, 1753; Nongob. 509, 1973. (Gramineae).

Satangsusu

Distr.: M. S. Use: Sugar, M.

Sagittaria sinensis Sims in Bot. Mag. 39: t. 1631, 1814. — *S. trifolia* L., nom. dub. rejic., var. *sinensis* Mak. in J.J.B. 1(11): 37, 1918; Fl. Cor. 7: 52, 1976. (Alismataceae).

Soeguenamul

Distr.: G. Use: M. (r.)

Fig. 32

Salvia miltiorrhiza Bge., Icon. Corm. Sin. 3: 669, 1874; Fl. Cor. 5: 224, 1975. (Labiatae).

Dansam

Distr.: G. Use: M. (r.)

Salvia officinalis L., Sp. Pl. 23, 1753; Fl. Cor. 5: 224, 1974. (Labiatae).

Jagsalbija

Distr.: G. Use: M. (l.), perfume

Saponaria officinalis L., Sp. Pl. 408, 1753; Dzosondong. 1: 354, 1959. (Caryophyllaceae).

Binupul

Distr.: G. Use: M. (r.)

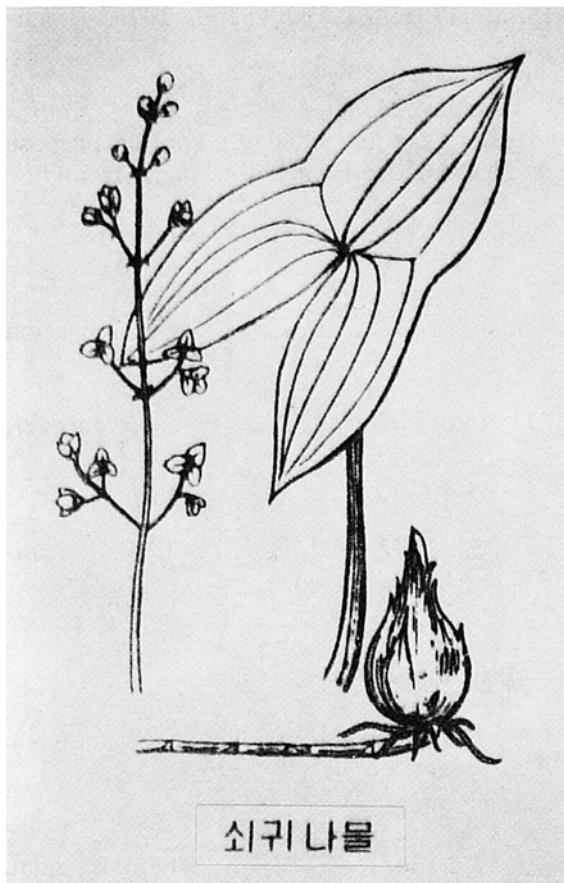

Fig. 32 *Sagittaria sinensis* Sims
is grown as a medicinal plant

Schisandra chinensis (Turcz.) Baill., Hist. Pl. 1: 148, 1868; Fl. Cor. 2: 180, 1974. — *Kadsura chinensis* Turcz. in Bull. Soc. Nat. Mosc. 7: 149, 1837; *Maximowiczia chinensis* (Turcz.) Rupr. in Maxim., Mem. Ac. Petersb. Sav. etr. 9: 31, 1859. (Schisandraceae).

Omidza

Distr.: G.

Use: M. (fr.), Sp.

Schizonepeta tenuifolia (Benth.) Briq. in Engl., Pflanzenfam. 4(3a): 235, 1895; Fl. Cor., Append. 312, 1979; Dzosondong. 2: 175, 1979. — *Nepeta tenuifolia* Benth., Labiat. Gen. et Sp. 468, 1836. (Labiatae).

Hjonggae

Distr.: G.

Use: M. (h.)

Scrophularia buergeriana Miq. in Ann. Mus. Bot. Lugd. Bat. 2: 116, 1865; Fl. Cor. 5: 284, 1975. — *S. oldhami* Oliv. in Journ. Linn. Soc. 9: 167, 1865. (Scrophulariaceae).

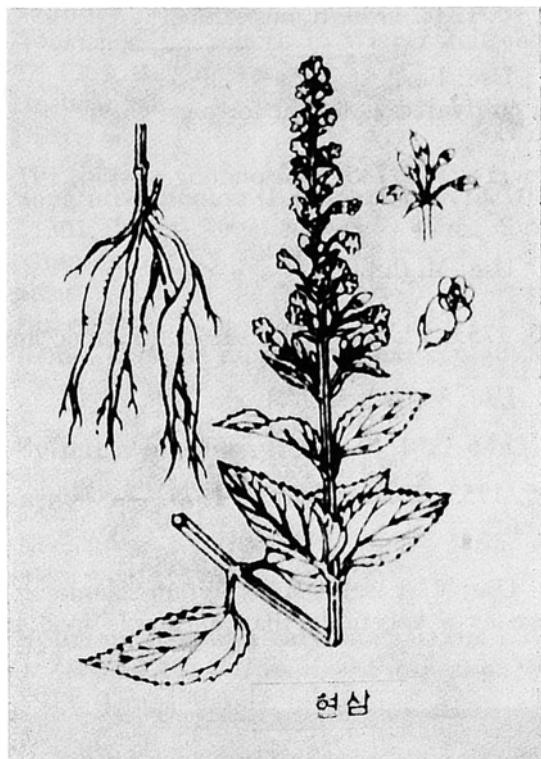

Fig. 33 *Scrophularia buergeriana*
Miq., a medicinal plant

Scutellaria baicalensis Georgi, Iter 1: 223, 1775; Fl. Cor. 5: 211, 1975. — *S. lanceolaria* Miq. in Ann. Mus. Bot. Lugd. Bat. 2: 110, 1865. (Labiatae).

Soggsogunpul, Hoanggum

Distr.: G.

Use: M. (r.)

Secale cereale L., Sp. Pl. 84, 1753; Fl. Cor. 7: 120, 1976. (Gramineae).

Homil

Distr.: N.

Use: C., Fo.

Rem.: C.

Sesamum indicum L., Sp. Pl. 634, 1753; Fl. Cor. 5: 334, 1975. — *S. orientale* L., l.c., 1753. (Pedaliaceae).

Tschamggae

Distr.: G.

Use: Oi., Sp., M. (s.)

Setaria italica (L.) Beauv., Ess. Agrost. 51, 1812; Fl. Cor. 7: 215, 1976. — *Panicum italicum* L., Sp. Pl. 56, 1753. (Gramineae).

Dzo

Distr.: G.

Use: C., Fo.

Rem.: C.

Silphium perfoliatum L., Syst. ed. 10: 1232, 1759. (Compositae).

Gughoapul

Distr.: N. M.

Use: Fo.

Rem.: Introduced as a new crop and cultivated as fodder for pigs. O.

Solanum laciniatum Ait., Hort. Kew. 1: 247, 1785; Dzosondong. 2: 176, 1979.

(Solanaceae).

Galadzinipgadzi

Distr.: M.

Use: M. (h.)

Solanum melongena L., Sp. Pl. 186, 1753; Fl. Cor. 5: 267, 1975. (Solanaceae).

Gadzi

Distr.: G.

Use: V. (fr.), M. (calyx)

Rem.: C. Fig. 34

Solanum tuberosum L., Sp. Pl. 185, 1753; Fl. Cor. 5: 267, 1975. — *S. sinense*

Blanco, Fl. Filip. 137, 1837. (Solanaceae).

Gamdfa

Distr.: G.

Use: V. (r.), St., M. (*Amylum solani*)

Rem.: The potato is considered more as a vegetable than as staple food in Korea. O.

Fig. 34 *Solanum melongena* L. shows a great variability with round (6), pyriforme (1, 2, 7) up to snake-like fruits (4) of different sizes

Sophora japonica L., Mant. 1: 68, 1767; Fl. Cor. 4: 42, 1976. — *Styphnolobium japonicum* (L.) Schott. in Wiener Zeitschr. Kunst etc. 3: 344, 1830; Dzosongod. 57, 1964. (Leguminosae).

Hoehoanamu

Distr.: G.

Use: M. (r.)

Sorghum bicolor (L.) Moench, Meth. 207, 1794, s.l. — *Holcus bicolor* L., Mant. 2: 301, 1771; *Sorghum vulgare* Pers., Syn. Pl. 110, 1805; Fl. Cor. 7: 243, 1976. (Gramineae).

Susu

Distr.: N. M. S.

Use: C.

Rem.: In some races the stems contain sugar and are used for fresh consumption. C.

Spinacia oleracea L., Sp. Pl. 1027, 1753; Fl. Cor. 2: 95, 1974. (Chenopodiaceae).

Sigumtschi

Distr.: G.

Use: V. (l.)

Rem.: Var. *oleracea* with spiny seeds and var. *inermis* (Moench) Metzg. are cultivated. C.

Spuriopimpinella calycina (Maxim.) Kitag. in J.J.B. 17: 559, 1941; Fl. Cor. 4: 486, 1976. — *Pimpinella calycina* Maxim. in Mel. Biol. Ac. Petersb. 9: 184, 1873. (Umbelliferae).

Tschamnamul

Distr.: G.

Use: V. (l.)

Rem.: The plant is also sometimes used for the preparation of "kimchi".

Stemonia japonica Franch. et Sav., Enum. Pl. Jap. 2: 92, 1877; Dzosondong. 2: 465, 1979. (Stemonaceae).

Baegbu, Nuunbaegbu

Distr.: G.

Use: M. (r.)

Stemonia sessilifolia Franch. et Sav., Enum. Pl. Jap. 2: 92, 1877; Dzosondong. 2: 465, 1979. (Stemonaceae).

Godunbaegbu

Distr.: G.

Use: M. (r.)

Stemonia tuberosa Lour., Fl. Cochinch. 404, 1790; Dzosondong. 2: 465, 1979. (Stemonaceae).

Madzunanbaegbu

Distr.: G.

Use: M. (r.)

Swertia japonica (Roem. et Schult.) Mak. in B.M.T. 24: 294, 1910; Fl. Cor. 5: 129, 1975. — *Gentiana japonica* Roem. et Schult., Syst. Veg. 6: 174, 1820. (Gentianaceae).

Ssunpul

Distr.: G.

Use: M. (h.)

Sympyton × uplandicum Nym., Syll. 80, 1855. (Boraginaceae).

Aegugpul

Distr.: N. M.

Use: Fo.

Rem.: Grown as fodder for pigs. O.

Thea sinensis L., Sp. Pl. 515, 1753; Fl. Cor. 4: 338, 1976. (Theaceae). — *Camellia sinensis* (L.) Kuntze, Reise 500, 1881.

Tschananmu

Distr.: S.

Use: For beverages, M. (l.)

Thladiantha dubia Bge. in Mem. Ac. Petersb. Sav. etr. 2: 103, 1833; Fl. Cor. 6: 81, 1976. (Cucurbitaceae).

Rem.: O.

Wasabia koreana = *Eutrema koreana*

Xanthoceras sorbifolia Bunge in Mem. Sav. etr. Petersb. 2: 85, 1834; Sigmul. 238, 1984. (Sapindaceae).

Girumbamnamu

Distr.: N. M. Use: Oi.

Rem.: Introduced as a new crop for mountainous areas. O.

Zanthoxylum piperitum DC., Prodr. 1: 725, 1824; Fl. Cor. 4: 181, 1976.
(Rutaceae).

Tschopinamu, Santschonamu

Distr.: M. S. Ch. U. Use: Sp., Oi., M. (fr.)

Zea mays L., Sp. Pl. 971, 1753; Fl. Cor. 7: 257, 1976; Gangnaengi 203–205, 1976.
(Gramineae).

Gangnaengi

Distr.: G. Use: C., Fi., M. (Stigmata Maydis)

Rem.: Introduced at the beginning of the 17th century via China. Since then, maize has developed a great morphological variability. But now the old land-races are severely endangered by genetic erosion. The following races are known in Korea, some of these are only grown for breeding purposes, cf. Gangnaengi, 1976: convar. *amylacea* (Sturt.) Montg. ("Nogmalgang-naengi"), convar. *ceratina* Kulesch. ("Rapdzilgangnaengi"), convar. *microsperma* Koern. (*Z. everta* Sturtev., "Pokljolgangnaengi"), convar. *dentiformis* Koern. (*Z. indentata* Sturtev., "Matschigangnaengi"), convar. *vulgaris* Koern. (*Z. indurata* Sturtev., "Gjongripgangnaengi"), convar. *saccharata* Koern. ("Gamigangnaengi"). C.

Final remarks

The amount of cultivated plants in Fl. Cor. is impressive. Altogether 316 species and several infraspecific taxa could be listed according to the sources used for this study. Of course, the sources can be incomplete or our interpretation may be wrong in some cases. But, at least, it was possible to confirm 113 species by own observations and/or collections. Some of these species even could not be found in our sources, e.g. *Symphytum × uplandicum* and *Silphium perfoliatum*. Further missions will increase our knowledge concerning the cultivated plants of Fl. Cor. For forthcoming explorations the checklist will be a useful tool. It should also be useful for botanists working with cultivated plants (about 80 plant families are covered) and for ethnobotanists, who will be particularly impressed by the large number of medicinal plants (about 145).

Zusammenfassung

Eine Liste der koreanischen Kulturpflanzen

Auf der Grundlage der „Flora Coreana“, anderer koreanischer Quellen und einer eigenen Exploration wurde eine Liste der Kulturpflanzen zusammengestellt, die dieser Flora zuzurechnen sind. Insgesamt konnten 316 Arten und zahlreiche infra-spezifische Taxa zusammengestellt werden. Zu jeder Art werden eine kurze Synonymie, Verbreitungstendenzen, Nutzung, der koreanische Name und in einigen Fällen zusätzliche Hinweise aufgeführt. Als Neukombinationen werden *Eutrema koreana* und *Fallopia ciliinervis* vorgeschlagen. Die Liste liefert eine brauchbare Grundlage für die Exploration pflanzlicher genetischer Ressourcen und kann auch für Ethnobotaniker und andere Wissenschaftler, die sich mit Kulturpflanzen befassen, von Interesse sein.

Краткое содержание

Список корейских культурных растений

На основе «Флоры Кореи», других корейских источников и собственных исследований был составлен список культурных растений. В общей сложности смогли указать 316 видов и большое число внутривидовых таксонов. Для каждого вида дается краткая синонимика, тенденция распространения, использование, корейское название, а в некоторых случаях, дополнительные указания. Как новая комбинация предлагаются *Eutrema koreana* и *Fallopia ciliinervis*. Список служит полезной основой для исследования растительных генетических ресурсов и может также представлять интерес для этноботаников и других ученых, занимающихся проблемой культурных растений.
