Unfortunately, there was a mistake in Fig. 3 of this contribution. The panels 3a and b should have been omitted. The correct figure is

The authors would also like to thank Prof. Andrea Magrini, Department of Biopathology-Occupational Medicine, Tor Vergata University, and Dr. Luisa Campagnolo of the Department of Biomedicine and Prevention for providing useful material.

Fig. 3 Induction of ROS generation by SWCNTs in HGFs. Cells were treated with different concentrations of nanotubes (50, 75, 100, 125, 150 µg/ml) for 24 h. The ROS production was measured by analysis of DCF fluorescence compared to untreated cultures. The results are expressed as percentage of control and reported as means ± SE of four separate experiments for each experimental point. The symbol (§) refers to the comparison between treated and untreated cultures. The symbol (*) refers to the comparison between one single dose and the previous one. (Published from Cicchetti R, Diviza M, Valentini F, Argentin G (2011) Effect of single-wall carbon nanotubes in human cells of the oral cavity: Geno-cytotoxic risk. *Toxicology in Vitro* 25: 1811–1819 with permission of Elsevier Ltd.)
