Unfortunately, there is one misprint on page 276, figure 11.
It has been reproduced in its right form here on the following
page.

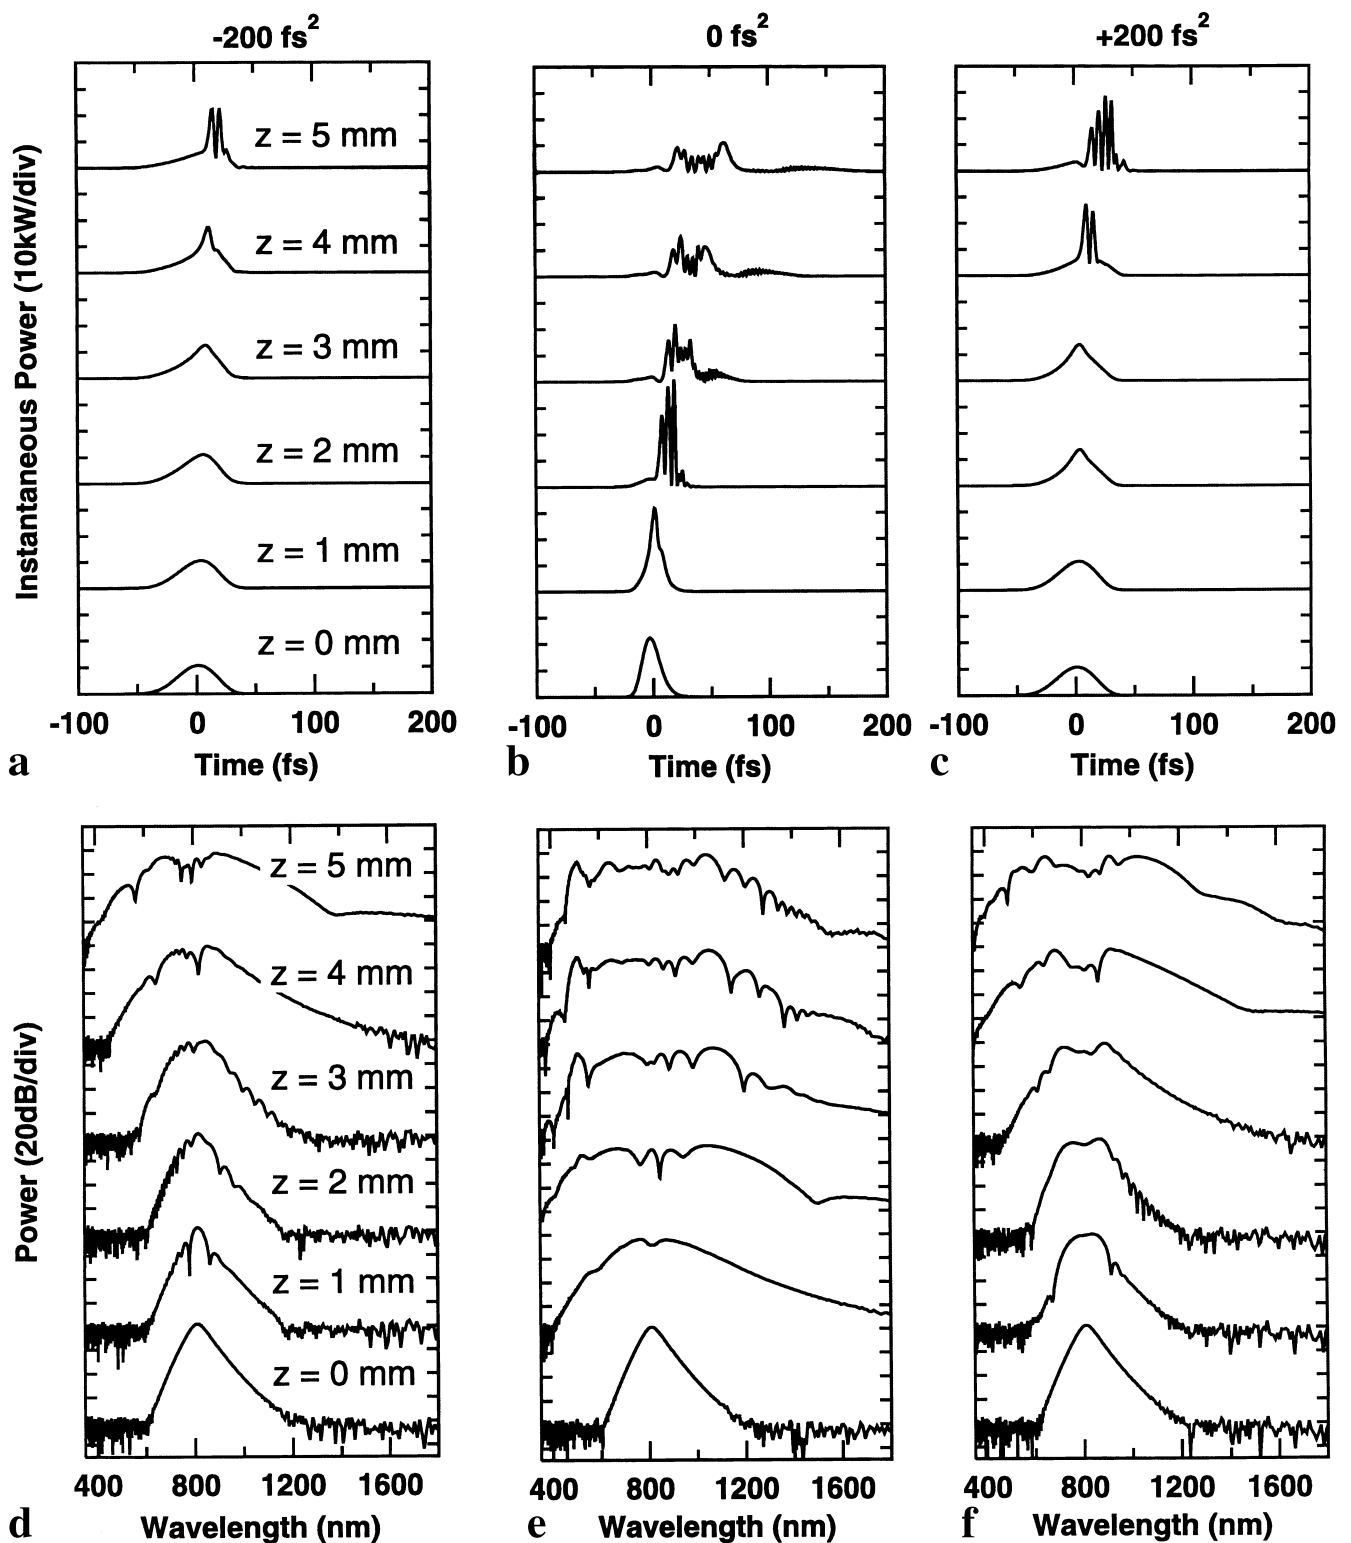

FIGURE 11 Evolution of the temporal pulse shape and pulse spectrum as a function of distance (z) along the fiber for three different input pulse chirps. The traces for different distances down the fiber are offset from each other for clarity. **a** and **d** correspond to a chirp of -200 fs^2 , a pulse duration of 38 fs, and a peak power of 21 kW; **b** and **e** correspond to a chirp of 0 fs^2 , a pulse duration of 19 fs, and a peak power of 44 kW; **c** and **f** correspond to a chirp of $+200 \text{ fs}^2$, a pulse duration of 38 fs, and peak power of 21 kW. The input pulse had a spectral bandwidth of 45 nm and a pulse energy of 0.85 nJ
