In the manuscript the Authors reported two illustrative cases: the first is the case of a 15-years old boy who underwent subtemporal transtentorial approach for the surgical removal of a cavernoma localized at pons and mesecephalon, the second is the case of a 20-years old girl who underwent a combined pre- temporal intra and extra dural approach with FTOZ craniotomy for a lesion localized in the Meckel's cave. There's mistake in the order of figures: the figures 5-6-7 refer to the second illustrative case, while the figure 8-9-10 refer to the first illustrative case.
