### ERRATUM TO: ECOHEALTH

DOI: 10.1007/s10393-016-1127-7

The legend for Figure 3, in “Environmental variables associated with Hantavirus reservoirs and other small rodent species in two national parks in the Paraná delta, Argentina. Implications for disease prevention” published in this issue of EcoHealth is incorrect and should read:

Figure 3. Capture rate (CR) of *O. flavescens* (black circle with solid line), *C. callidus* (gray rhomboid with dashed line), *Holochilus* sp. (gray square with solid line), *O. rufus* (black circle with dashed line), and *A. azarae* (black triangle with dashed line) in Islas de Santa Fe National Park: **a** island 1, **b** island 2, and Pre Delta National Park: **c** riparian forest, **d** inland forest, **e** marsh, and **f** pond margins from July 2008 to September 2011. Arrows show removal of all captured *O. flavescens* individuals. Note different scaling of  $y$ -axis for the islands.
