### Erratum to: J Gambl Stud DOI 10.1007/s10899-011-9262-0

In the original publication under the “Results section”, the correlation between post-cue exposure GUS scores and Gambling Refusal Self-Efficacy should read ( $r = -.59$ ,  $P \leq .001$ ).

That is, the corrected sentence should read “Specifically, post-cue exposure GUS scores were correlated with GBQ-Perceived Luck/Gambling Perseverance ( $r = .63$ ,  $P \leq .001$ ), with GBQ-Illusion of Control ( $r = .46$ ,  $P \leq .001$ ), with overall Gambling Refusal Self-Efficacy ( $r = -.59$ ,  $P \leq .001$ ), with the SOGS-RA ( $r = .60$ ,  $P \leq .001$ ), with the number of days one gambled per week ( $r = .52$ ,  $P \leq .001$ ), and with the BSSS ( $r = .46$ ,  $P \leq .001$ )”.
