

Keyword Index for Volume 33

A

aerogel, 121, 127
alkoxide, 75
alumina, 117
aluminophosphate, 341
anti-microbial tests, 229
anti-reflection coatings, 71
anti-reflection, 117
aqueous solution-gel, 283
AFM, 341

B

bacteriorhodopsin, 51
barium strontium titanates, 315
barium strontium titanate, 299
barium titanate, 221
benzoquinoline, 333
BET surface measurements, 133
block copolymers, 15

C

C₂H₄/C₂H₆ separation, 327
carminic acid, 261
centrifugation, 193
characteristic, 103
chemical modification, 187
chemical modification, 307
cluster aggregation model, 159
coating film, 117
color nature, 261
color stability, 261
Candida antarctica, 65
condensation kinetics, 255
copper-zirconia band gap, 93
copper-zirconia FTIR, 93
copper-zirconia sol-gel, 93
copper-zirconia XRD, 93
core-shell mechanism, 15
cross linking, 39
crystallization behavior, 103
crystallization, 307
CSD, 299
cyclic voltammetry, 25

D

1,4-dichlorobenzene (DCB), 87
decomposition pathway, 283
denitrifying, 59
dielectric properties, 315

E

electrophoretic deposition, 221
elevated temperature, 323
epoxidation, 127
Eu³⁺-doped glass, 47

F

facilitated transport, 327
femtosecond laser, 47
ferroelectric, 307
films, 275, 315
first shell substitution effect, 255
fluorescence properties, 269
fluorescence spectra, 333
forward and backward photocurrent, 51

G

gel films, 9
gel structure, 283
glass, 341

H

hemoglobin, 187
hopping transport, 327
hot water treatment, 117
hybrid materials, 33
hybrid particles, 81
hybrid, 39
hydrolytic polycondensation, 9
hydrothermal process, 87
hydroxyapatite, 229
hyphenated thermal analysis, 283

I

inorganic-organic hybrid membrane, 327
ion pair, 333

L

lead-free, 307
lipase, 65
low temperature processing, 299

M

membrane photocatalytic reactor, 201
mesopore structure, 159
mesoporosity, 121
mesoporous organosilicas, 99
methylene blue, 187
micelle, 15
modified alkoxide precursors, 201

modified silica, 133
multilayered film, 323

N

n-hexane isomerization, 121
4-nitrophenol photodegradation, 201
NADH, 187
nano-particles, 71
nano-size sol-gel film, 187
nanoporous structure, 15
nanorod arrays, 193
naphthenic acid, 215
nitration, 81
nitrifying, 59
NMR, 341

O

optical materials, 269
optical pH sensors, 175
organic hydroxide, 33
organic-inorganic hybrid materials, 175
organic-inorganic hybrid, 9
organic-inorganic hybrids, 9
organically modified silicates, 25
ormosil, 51
Ostwald ripening, 159
oxide crystallization, 283
oxide semiconducting film, 323
oxotantalum cluster, 39

P

patterned microstructure, 221
pearl lustre pigments, 71
phenyltrimethoxysilane, 81
phosphor, 75
photocatalysis, 87
photocatalyst, 87
photoelectrochemistry, 51
photopyroelectric technique, 59
pH, 255
pillar array, 221
polymer, 39
polymethylhydrosiloxane, 33
polyvinylpolysilsesquioxane, 9
precursors, 275
protonated species, 333
pyrolysis, 99

R

Raman spectroscopy, 127
rare earth ion, 47
rare earths, 269
rectifying property, 323
refractive index, 169

S

²⁹Si MAS-NMR, 33
²⁹Si MAS-NMR, 255
SANS, 65

short-range microbial inhibition, 229
silica gel, 159
silica glass, 215
silica spheres, 71
silica, 59, 121
silicon oxycarbide, 99
silver, 229
single precursor, 75
SiO₂-poly(N-vinylpyrrolidone)-Ag⁺, 327
small angle X-ray scattering, 159
SNMS, 341
sol-gel glass, 269
sol-gel method, 59
sol-gel method, 175
sol-gel process, 25, 87
sol-gel processes, 315
sol-gel processing, 193
sol-gel route, 229
sol-gel, 47, 75, 103, 117, 127
sol-gel-xerogel transitions, 333
sol-gel, 169
sol-gel, 275
sol-gel reaction, 15
solution-sol-gel, 307
spectral hole-burning, 47
Sr₂CeO₄, 75
Stöber particles, 255
Streptococcus mutans, 229
sulfated zirconia, 121
surface modification, 81

T

template-based growth, 193
tensile strength, 9
thermal analysis, 39
thin films, 299
tin oxide, 81
TiO₂, 275
TiO₂ gels, 201
titania-silica (SiO₂-TiO₂), 87
transmission electron microscopy, 25
trimethoxy(vinyl)silane, 9

V

vanadia-silica, 127

X

X-ray powder diffraction, 133
xerogel, 127
XPS, 127

Z

zinc titanate, 103
zinc, 229
zirconia, 133
zirconium oxychloride, 169
ZnO, 215
ZrO₂-SiO₂ gel glass, 169
