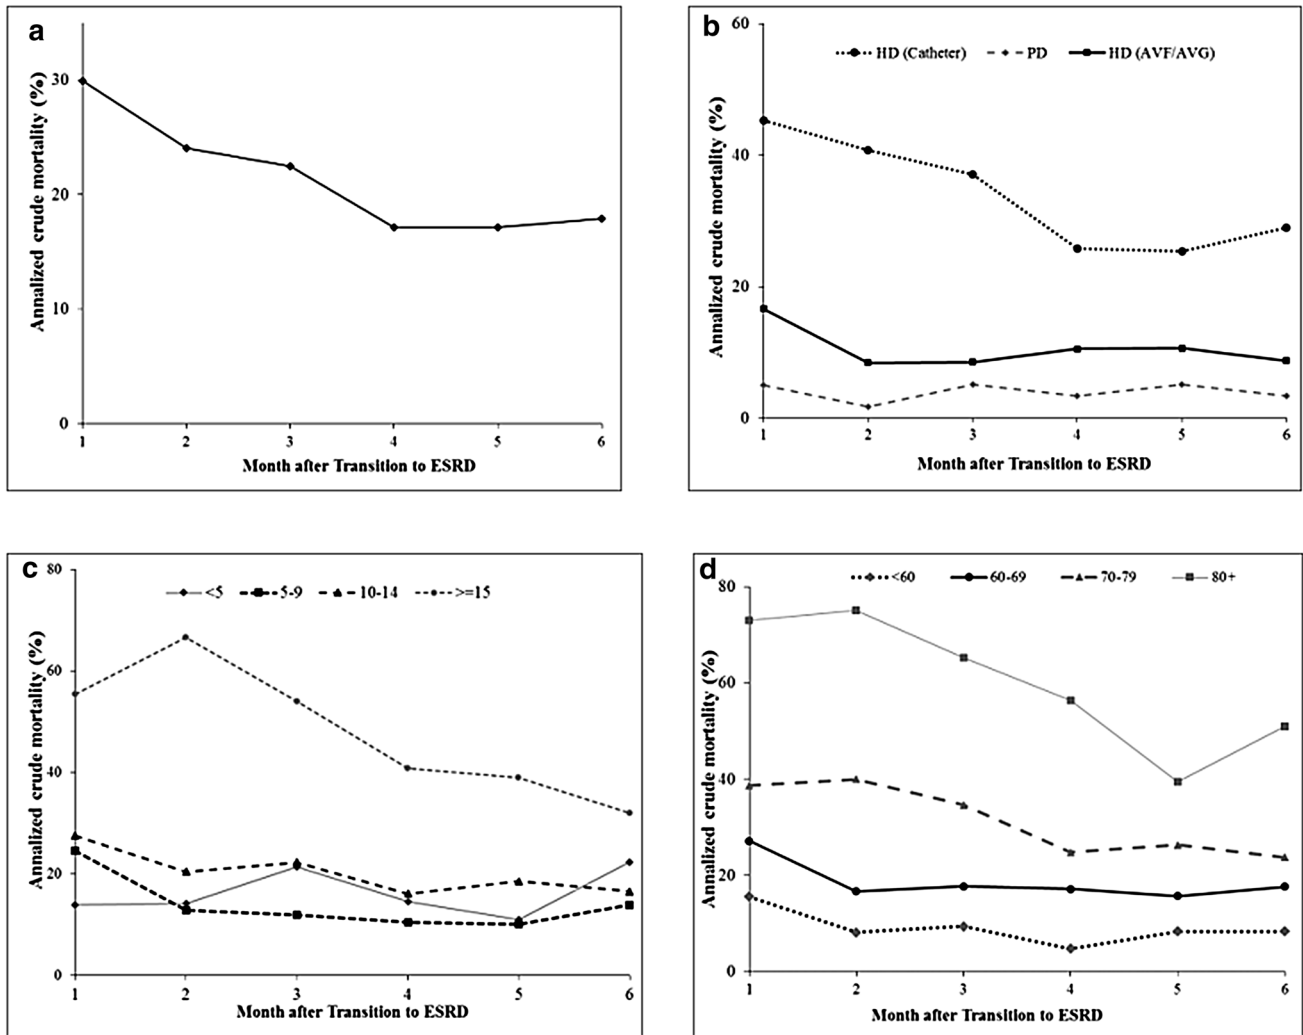

Fig. 2 Monthly mortality rates up to 24 months of follow-up are reported in deaths per 100 person-years. **a** Mortality rates for the entire ESRD transition population ($N = 5373$). **b** Mortality rates for hemodialysis with catheter (HD catheter), hemodialysis with AVF/AVG (HD-AVF/AVG) and peritoneal dialysis (PD) populations

separately not including transplant. **c** Mortality rates of the entire study cohort categorized by eGFR at transition (< 5 , $5-9$, $10-14$, and ≥ 15 ml/min/1.73 m²). **d** Mortality rates of the entire study cohort categorized by age (< 60 , $60-69$, $70-79$, and ≥ 80)
