In light of the recent retraction of the *New England Journal of Medicine* article entitled “Cardiovascular Disease, Drug Therapy, and Mortality in COVID-19” (Mehra et al., full citation provided below), the authors would like to remove the following statement, which appeared on page 2, under the heading **Cardiovascular Disease and COVID-19**:

“An observational database of the Surgical Outcomes Collaborative registry, which comprised of 8910 hospitalized COVID-19 patients from 169 hospitals in Asia, Europe, and North America, found that an age greater than 65, and diagnosis of history coronary artery disease, heart failure, and/or cardiac arrhythmias were independently associated with

increased risk of in-hospital death, with 5.8% ($n = 515$) of this cohort dying in the hospital [17].”

Given the existence of other epidemiological studies cited in this review, the authors believe the removal of this statement does not significantly alter the impact and objectives of this article.
